Aiz Core - Detailed Explanation

Aiz Core is not a plugin like WordPress plugins. Instead, it is a PHP/Laravel-based package that works as a core module for e-commerce applications, particularly used in Active eCommerce CMS (a Laravel-based eCommerce solution). Key Details about Aiz Core: 1. Nature: - It is a core package/module. - Provides backend functionalities for eCommerce systems. 2. Purpose: - Handles essential business logic like: • Product management • Categories & attributes • Customers & orders • Payments and transactions • File upload and management (AizUploader) 3. Relation with Active eCommerce CMS: - Active eCommerce CMS (built with Laravel) includes Aiz Core by default. - Aiz Core ensures that most of the dynamic functionality works properly. 4. Not a Plugin: - Unlike WordPress plugins, Aiz Core is not an external plugin that you just upload and activate. - It is deeply integrated within the Laravel application structure. 5. Usage in Development: - Developers working with Active eCommerce CMS will see references to Aiz Core in the source code. - It acts like a backbone package that powers the CMS. 6. Example Features Supported by Aiz Core: - Product creation and management. - Order processing and tracking. - Customer profile and authentication. - API endpoints for mobile apps and integrations. In summary, Aiz Core is a backend core package/module that comes bundled with Active eCommerce CMS and provides essential functionalities required to run an eCommerce system.
